SYLLABUS

Title of the Certification: **PLC Fundamentals and Advanced**

Year: **IV**

Trainer Names: **K.Kiran Varma, Y.Madhu Vamsi, Y.Siva Gangadhara Rao**

Academic Year: **2020-21**

Duration: 6 Days

Course Description:

Programmable Logic Controllers (PLCs) are small industrial computers with modular components designed to automate customized control processes. PLCs are often used in factories and industrial plants to control motors, pumps, lights, fans, circuit breakers and other machinery. Automation is set to disrupt almost every area and process, including equipment communications, maintenance and repairs, and production. There's a reason why the global market for PLCs stands at \$16 billion a year, growing annually at 9.2%. Their robust design, low costs, and simplicity in the face of complex integrations make them a fundamental component in manufacturing. Without PLCs, many businesses wouldn't be able to support the implementation of new control technology. For now, PLCs continue to remain integral to the digital transformation Industry 4.0 promises to make.

Course Description:

Embedded systems are a combination of hardware and software. Where software is usually known as firmware that is embedded into the hardware. One of its most important characteristics of these systems is, it gives the o/p within the time limits. Embedded systems support to make the work more perfect and convenient. So, we frequently use embedded systems in simple and complex devices too. The applications of embedded systems are mainly involved in our real life for several devices like microwave, calculators, TV remote control, home security and neighborhood traffic control systems etc.
